Dear Mr. Sengupta,

This issue was first raised on 31st May 2021. Till now the problem hasn't been resolved.

Every time the living room gets flooded during heavy shower due to back flow of water from balcony, drawing / dining room furniture and other household items are getting damaged. We have informed you and maintenance office regarding the said problem on every time we faced. Unfortunately, no rectification work has done to resolve this issue permanently – except sending representative just to eye wash the inhabitants.

Last time I mentioned in my email that the outlet pipe is undersized. The pipe size is not properly determined considering the complete rainwater volume collection from top floors. Video photograph has been sent to you earlier. The problem is persistent during heavy shower.

Please note that I am a civil engineer – working in this field for last 25 years and have been able to recognize the actual reason of backflow of water.

If you are sincere to resolve this problem on permanent basis the rainwater pipe should be replaced. Therefore, I request you to handle this issue with proper planning and assessment.

Dear Mr. Puri,

I am involving you here as it is a long-time pending issue and also project quality issue.

Now I have a doubt on main structural element design integrity. How would I be comfortable or feel safe on its structural integrity when a non-structural element like rainwater outlet pipe is very much under designed?

Assuming back flow water problem will be addressed by the project team with proper assessment. Hoping that the building structural integrity is not compromised.

Thanking you with anticipation.

Regards,

Debasis Pahari

Dear Mr. Sengupta,

The water backflow issue is still persistent as evident from today's heavy rainfall. The entire balcony was flooded with water seeping in through the aluminum channels. Hopefully, we were at home this time and could clear way the furniture in time.

A gentleman from Elita group did visit the flat a month back or so and assured that the issue had been taken care of by cleaning the drain water pipes. Although I tried to reason with him that blockage is not the cause of the backflow, he seem pretty confident of the actions taken. I finally chose to wait and see the effects.

Long story short, it is time that the larger picture be looked into and the real cause of the problem be identified because the temporary solutions have been proved to be inefficient time and again.

I request you to take this issue on priority and help getting it resolved.

Thanks,
Anirban Bhattacharya

Subject: Re: Blk 11 - 501 : water back flow issue

Dear Sir,

The necessary rectification work will be done tomorrow.

RE: Somnath

As discussed please ensure the same is being done by tomorrow..

Dear Mr. Sengupta,

Please refer my below e-mails regarding water back flow issue. I have also sent few messages to your WhatsApp number but unfortunately no response has been received yet.

This problem is making life miserable and damaging lot of house hold items which are kept at living room.

Please be kind enough to acknowledge my complaint and take necessary steps to resolve this issue at the earliest.

Hope our situation will be understood and permanent solution to be provided.

Thank you with anticipation.

Subject: Re: # 0501 at Blk 11

Dear Mr. Sengupta,

This is further continuation with my earlier mail dated 31 May 2021.
Water overflow issue is not yet resolved.

Today again water is back flowing through drain pipe to balcony during heavy shower. Please refer attached video clip taken during rain water entering to the balcony area, as a result living room is flooded.

It is a clear indication of poor assessment on main water outlet pipe size. Existing pipe size is inadequate to handle entire rainwater from top floors during heavy rainfall.

Proper engineering assessment and rectification method is required to resolve this issue. Any short term eye wash approach (JUGARD technology) will not fix this problem.

Hope, you will take this on priority basis with the project team and resolve this issue at the earliest.

Your attention on this issue to make our life little better.

Thank you with anticipation.

Good Morning Mr. Sengupta,

I am owner of T11 #0501.

There is major water drainage problem faced by my Tenant, Mr. Bhattacharya, today morning (31 May 2021).

Leaving Room is flooded with water (water stagnation is about 2") from Balcony due to heavy rain. It is quite obvious that the balcony water is not smoothly drained out during rain. The concern has already raised to the EGV maintenance team but unfortunately it can't be attained before 8am (IST). **It is also stated that the work is related to project.**

Please refer below e-mail which is self explanatory.

Your immediate help is very much appreciated. I have already messaged you in WhatsApp.

Thank you.

Regards,
Debasis Pahari

Water had flooded the flat and water kept entering from the balcony. Noticed water is entering the balcony through the drain pipe.

Called up maintenance and they said they can't do anything before 8 am, and that it is the job of the projects.

Me and my wife had to scrape out the water

Dear Sir,

For the past 2-3 days dark water with residues and foul smell are coming out from the cisterns. Is there any problem with the STP in general or something wrong with this flat?

The helpdesk feature seems to be unavailable in MyGate, hence communicating via email.

Thanks,
Anirban Bhattacharya
