REINFORCEMENT DETAILS
 (Sheet 3 of 3)

GENERAL NOTES:
 1. The above drawings are prepared in accordance with the specifications of the Indian Standards Institute (I.S. 456-1978) and the specifications of the Indian Standards Institute (I.S. 800-1962) for reinforcement steel.
 2. The concrete grade is M20 and the reinforcement grade is Fe 415.
 3. The design is based on the ultimate limit state.
 4. The design is based on the assumption that the structure is subjected to seismic loads.
 5. The design is based on the assumption that the structure is subjected to wind loads.
 6. The design is based on the assumption that the structure is subjected to snow loads.
 7. The design is based on the assumption that the structure is subjected to fire loads.
 8. The design is based on the assumption that the structure is subjected to impact loads.
 9. The design is based on the assumption that the structure is subjected to explosion loads.
 10. The design is based on the assumption that the structure is subjected to other loads as specified in the contract documents.
