

1. The Building Code of India (BCI) is the primary authority for the regulation of building construction in India. It is a comprehensive code of practice that covers all aspects of building construction, from the design and construction of the building to the safety and health of the occupants. The BCI is divided into several parts, each covering a different aspect of building construction. Part 1 covers the general provisions, Part 2 covers the design and construction of buildings, Part 3 covers the design and construction of structures, Part 4 covers the design and construction of bridges, Part 5 covers the design and construction of dams, and Part 6 covers the design and construction of other structures. The BCI is a dynamic document that is updated regularly to reflect the latest developments in building technology and practice. It is a key reference for all building professionals in India, and it is essential for ensuring the safety and quality of building construction.
