Mrs Pinky Ghosh

30yrs / F

ad.

Anaplastic Astrocytoma

post op / post RT on 2015

- on regular follow up

MRG Brain (Plain & contrast)

Postop. follow up case of left frontal lobe glioma, now showing 40% postop. changes.

Small nodular areas of marked GRB hypointensities in left frontal parietal lobe are likely to be due to old blood (postop. changes)

Small area of supratentorial leuco gliosis seen in left frontal lobe. All defined nonenhancing areas of altered signal being hyperintense in T2 & FLAIR seen in left frontal parietal lobe 40% post Ht changes / ischaemic gliosis.

All defined areas of leuco gliosis in left paracentral & left paraventricular regions along with multiple scattered ischaemic foci in cerebral white matter.

Follow up after 6mths

MRG Brain (Plain)

low level of 1 lab test

NO neurological deficit

afsh

MR Spectroscopy

no significant neurochemical lesion seen in MR.
